Serial No. 09/913,332

Art Unit 1711

Claims 2 and 4 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicants regard as the invention.

The term "molecular weight" is unclear and unqualified as to the type of molecular weight, i.e. number or weight average etc. molecular weights since the various measures of molecular weights may vary considerably.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Serial No. 09/913,332
Art Unit 1711

Claims 1-6 and 8 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Junji et al. (JP 06-271717.

Junji et al. disclose a composition containing polypropylene and polystyrene in a 70/30 or 30/70 weight ratio in combination with a styrene/butadiene/styrene hydrogenated block copolymer at a level of 10 or 30 parts per 100 parts of the composition. Note Table 1 on page 5 of the Japanese patent. Note that Runs 6-8 contain 50% vinyl content in the diene block. Since applicants' materials are all present in the composition in applicants' proportions, it would reasonably appear that applicants' characteristic that component C exists at the inner phase between the phase of components A and B would be inherent.

When the reference discloses all the limitations of a claim except a property or function, and the Examiner cannot determine whether or not the reference inherently possesses properties which anticipate or render obvious the claimed invention, basis exists for shifting the burden of proof to applicant. Note <u>In refitzgerald et al.</u> 619 F. 2d 67, 70, 205 USPQ 594, 596, (CCPA 1980). See MPEP § 2112-2112.02.

Claims 1-6 and 8 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Shinetsuro et al. (JP 06-192502).

Serial No. 09/913,332
Art Unit 1711

Note that applicants' International Search Report indicates that Japanese Patent 06-192502 is in the "X" category for claims 1-6 and 8. Therefore Shinetsuro appears to anticipate the claims and applicants' characteristic appears to be reasonably inherent.

When the reference discloses all the limitations of a claim except a property or function, and the Examiner cannot determine whether or not the reference inherently possesses properties which anticipate or render obvious the claimed invention, basis exists for shifting the burden of proof to applicant. Note <u>In refitzgerald et al.</u> 619 F. 2d 67, 70, 205 USPQ 594, 596, (CCPA 1980). See MPEP § 2112-2112.02.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Kawamura et al. (JP 4-45140).

Kawamura et al., cited on applicants' International Search
Report is indicated to be in the "X" category and therefore
anticipates the claims. It is assumed that applicants'
characteristic is not explicitly disclosed but that (based on the
search report) all other features appear to be present and
therefore that applicants' characteristics are inherent.

When the reference discloses all the limitations of a claim except a property or function, and the Examiner cannot determine whether or not the reference inherently possesses properties which anticipate or render obvious the claimed invention, basis
